EDUCATION

Bachelor of Computer Science | University of New Brunswick, Fredericton, NB

Sept 2023 - Present

- Dean's List 2023-2024 | GPA: 3.5
- Relevant Coursework: Software Engineering, Algorithm Design and Analysis, Net-Centric Computing, Operating Systems, Software Security, Computer Architecture, Foundations of Privacy, Cryptanalysis & Database Security

TECHNICAL SKILLS

- **Languages & Databases:** Java, JavaScript, HTML/CSS, Python, C, MySQL, SQLite
- **Frameworks & Libraries:** React, Node.js, Express, REST APIs, FastAPI, JavaFX, Apache POI, scikit-learn, pandas
- **Cloud & Tools:** AWS (EC2, ECR), Docker, GitHub Actions (CI/CD), Git/GitHub, JUnit, Jupyter, Wireshark, Microsoft Excel (advanced formatting, pivot tables)
- **Security:** IAM, Session Management, Threat Modeling, Cryptographic Integrity (AES-256, SHA-256), Vulnerability Scanning, Incident Triage & Escalation

WORK EXPERIENCE

Software Engineering Intern | German Service Center, Dammam, Saudi Arabia

July 2025 - August 2025

- Built an automated invoice estimate workflow that calculates estimates, sends them to a manager for approval, and emails approved estimates to customers.
- Built a part-sourcing algorithm that estimates delivery times and picks the best vendor when parts are out of stock.
- Wrote Python scripts that check the database daily, remove old records, and report metrics such as average repair time and repeat issues.
- Wrote technical documentation and system workflow diagrams for non-technical staff so the software is easy to maintain.

PROJECTS

NADTFE | Python, FastAPI, React, Docker, AWS – [project repository](#)

September 2026

- Built a machine learning system that flags attack traffic in the NSL-KDD network dataset, using a scikit-learn RandomForest model scored by precision, recall, and F1.
- Built a FastAPI service that scores network records, and a React dashboard to classify single records and view past results.
- Wrote the data loading and feature pipeline, including a saved one-hot encoder that handles values the model has not seen before.
- Packaged the backend and frontend with Docker Compose, and set up GitHub Actions to test, build, and deploy to AWS EC2.

Grade Vault | JavaScript, React, Node.js, Express, SQLite – [project repository](#)

March 2026

- Built a role-based grade management web app with student, teacher, and admin roles, using server-side middleware to control access.
- Used and reviewed open-source middleware to add 9 security controls mapped to CWE, including session management, password strength checks, and CSV validation.
- Built secure login with HTTP-only session cookies to protect user credentials and academic records.
