WORK EXPERIENCE

Software Engineering Intern | German Service Center – Dammam, Saudi Arabia *July 2025 – August 2025*

- Designed and implemented an automated invoice estimation workflow, calculating service estimates, routing them for managerial review and approval, and automatically sending approved estimates to customers via email.
- Developed a part-sourcing algorithm to estimate procurement timelines and identify optimal vendors when parts were out of stock.
- Wrote Python automation scripts to perform daily database checkups, clean outdated records, and generate operational metrics such as average repair time and recurring issues.
- Drafted comprehensive technical documentation and system architecture workflows for non-technical stakeholders, ensuring smooth long-term software maintenance.

PROJECTS

[Grade Vault](#) | JavaScript, React, Node.js, Express, SQLite

March 2026

- Built a role-based grade management system with strict identity and access management (student/teacher/admin roles) using server-side middleware.
- Leveraged and audited open-source middleware to implement 9 CWE-mapped security controls including session management, password strength enforcement and CSV validation.
- Designed secure authentication using HTTP-only session cookies, ensuring safe handling of sensitive user credentials and academic records.
- Documented security control decisions and risk observations to support future security audits and compliance reviews

[Secure Drop Vault](#) | Python

March 2026

- Developed a command-line encrypted storage system using AES-256-CBC with unique IVs per record, simulating real-world data-at-rest protection requirements
- Designed a salted key derivation scheme and built a tamper simulation module to test integrity verification (SHA-256), detecting and flagging ciphertext tampering, directly mirroring incident investigation and alerting workflows.

EDUCATION

Bachelor of Computer Science | University of New Brunswick, Fredericton, NB

Sept 2023 – Present

- Dean's List 2023-2024 | GPA: 3.5
- Relevant Coursework: Net- Centric Computing, Software Security, Foundations of Privacy, Cryptanalysis & Database Security, Computer Architecture, Software Engineering, Algorithm Design and Analysis, Operating Systems

TECHNICAL SKILLS

- **Languages & Databases:** JavaScript, Java, Python, C, MySQL, SQLite
- **Frameworks & Libraries:** React, Node.js, Express, JavaFX, Apache POI
- **Security:** Incident Triage & Escalation, IAM, Session Management, Threat Modeling, Cryptographic Integrity (AES-256, SHA-256), Vulnerability Scanning.
- **Tools & Testing:** Docker, Git/GitHub, Wireshark, Jupyter, JUnit, REST APIs, Microsoft Excel (advanced formatting, pivot tables)
- **Cloud:** AWS EC2, Cloudflare
- **AI tools:** Claude, ChatGPT
